

FLUORESCENT MAGNETIC POWDER CONCENTRATE

- Good storage stability, can be used immediately after slight shaking
- Dilution with water is all that is needed to prepare the magnetic suspension, no additional dispersant is required
- Good wettability, even walking of the suspension, high inspection accuracy
- Good dispersion stability, small change in the concentration of the suspension, can reduce the amount of use

Code	Description	Package/bottle
MPI-CC20	<ol style="list-style-type: none">1.Suitable for surface and near-surface inspection of magnetizable parts (especially for on-line automatic inspection)2.Usage: Dilute the suspension to the recommended concentration (0.5~1.0g/L) to formulate a high-performance magnetic suspension	500ml
